

How can you **minimize loss** in case of an **incident?**

# BUSINESS CONTINUITY MANAGEMENT

The purpose of the Business Continuity Management (BCM) framework is to define the preparation processes, tasks and responsibilities in case of an incident which affects the critical processes of the entire company. If business information is unavailable, the related processes will be damaged and it may lead to serious financial and reputational loss. BCM includes the Business Impact Analysis (BIA), the designation of the critical business processes and systems in order to make the Business Continuity Plans (BCP) and Disaster Recovery Plans (DRP) and minimize loss in case of an incident. Your process owners define the value of the processes, which determines the requirements for Business Continuity and Disaster Recovery Plans. The process owners will also define the replacement procedures for the case of an outage of the process caused by an IT incident or natural disaster. QUADRON will coordinate this activity, and can perform BCM awareness trainings to increase the awareness level and help the communication between IT and Business.

### **Business and security advantages of the service:**

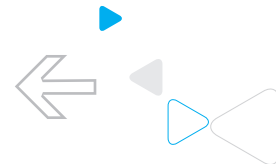

- ▶ Reduce the outage time of business processes and minimize financial and reputational loss caused by an incident
- ▶ Business continuity plans increase the trust of interested parties
- ▶ Increase security awareness and preparedness for business/IT interruptions
- ▶ Improve the effectiveness of the communication between IT and Business

### **During the on-site work, QUADRON will:**

- ▶ Provide qualified (CISA, CISM, ISO 22301 Auditor) professionals to facilitate the implementation of BIA or BCM
- ▶ Prepare the Business Continuity Management framework, tailored to your needs
- ▶ Identify critical business processes and related critical resources (in Business Impact Analysis phase)
- ▶ Define the Recovery time objective of critical processes
- ▶ Evaluate the threats and risks, using ISO 27005 standard for business continuity
- ▶ Help the process owners to prepare continuity plans and define alternative processes

### **Delivery of the service:**

- ▶ BCM Policy
- ▶ Business Impact Analysis result (critical processes)
- ▶ Business Continuity and Disaster Recovery Plans

### **Qualitynet's Strategic Partner in IT Security**

QUADRON Cybersecurity Services Ltd. is a specialist of digital security, data and system protection. Our team of consultants at our consultancy and service competence center are professionals with a minimum of 10 years of experience and the highest level of expertise certified at international theoretical examinations. The service scope of our experts includes conventional IT security services such as auditing, vulnerability testing and penetration testing, while our service center is capable of designing and building the most complex protection systems.
